

AK-12UBS 12 GA Under Barrel Shotgun

AK-12UBS is a 12 ga pump action shotgun designed to be an ancillary weapon to be attached to infantry rifles comprising an under-barrel Picatinny rail. In addition, AK-12UBS can be used in stand-alone form thanks to the adjustable stock accessory provided with the gun.

This UBS can shoot both lethal (steel or lead pellets) or non-lethal (rubber) ammunition and is quite effective for riot control and close combats as the shotshells that it fires will spread and hit a wide area.
